

# VIRTUAL PATIENT

## Virtual Patient System – Medical Education and Pandemics

The COVID-19 **pandemic** outbreak in 2020 had endless unprecedented consequences, primarily in the educational system, forcing us to move from the traditional frontal schooling environment into the virtual **remote / online** environment.

The **Virtual Patient System** (VP™ System) is based on the very idea of **virtual / remote teaching / learning**, which is at the core of its operating mechanisms. Since Medical Learning Institutions around the globe desperately search for a solution which would allow them continuance of the learning process during the time of Pandemic, we already have such a solution ready and extensively tested.

The VP™ System a computerized **platform** enabling teaching, practice and competence assessment of medical students' skills in patient evaluation. It is **interactive, multilingual and internet based** and offers a colossal **medical knowledge base** (database) of medical cases which enables teaching Medicine **much faster, at a significantly lower cost and more reliably**, being **the only tool of its kind** currently in existence.

The platform is **easily implemented**, simple to comprehend and put into use and can be **integrated smoothly** with the existing teaching methods and syllabus of any Medical Learning Institution. It has a **proven success rate** and is **extremely popular and well received** by Medicine students (including Dentistry, Veterinary, Nursing and other medicine related students) who are used to e-learning and computer interaction.

The VP™ System was developed by Virtual Patient Ltd., an Israeli Medical Software company, and it is a **state-of-the art, innovative and revolutionary step in e-learning and e-assessment environment** applicable to every Medical Learning Institution, which **has been tested and implemented successfully** at The Ruth and Bruce Rappaport Faculty of Medicine, **Technion** (Israel Institute of Science and Technology) for many years and is being introduced in other Medical Schools.
